PLANC

Bio-Fertiliser &
Soil Conditioner

DISCRIPTION

PLANC is in powder form, **PLANC** contains many bio-compounds in it, which are useful for plant production, soil conditioning nature of the **PLANC** will help in improving the soil by influencing the microflora and aeration, fumigation character of the **PLANC** will help in protecting new plants.

PLANC APPLICATIONS

PLANC will supply 20% of the total nutrients availability to the plants are 100% whereas chemical fertiliser will not be available in 100% due to its leaching and volatilisation.

BENEFITS OF PLANC

- ❖ **PLANC** is graded as No.1 bio-fertiliser around the globe.
- ❖ **PLANC** can be used as bio-fertiliser in nursery growers, market gardeners, orchard owners, vegetable growers.
- ❖ **PLANC** supplies Nitrogen, Phosphorous, Potassium and trace elements. (Please refer the analysis part of the label).
- ❖ **PLANC** helps in fixing atmospheric nitrogen and reduces nitrogen leaching.

PLANC as Bio-Fertiliser

- PLANC [Plant Needs Neem Cake] is the material left after oil is squeezed out from Neem seeds and is popularly known as the 100% Neem seed cake. It acts as a bio fertiliser and soil conditioner by supplying the required nutrients to plants.

PLANC as Manure

- PLANC can be used to manufacture high quality organic manure. It can be used directly by mixing with the soil or it can be blended with nitrogen fertiliser, vermi compost and sea weed extracts for best results.

Available Weights:
20Kg, 800Kg.

PLANC as fertiliser coating agent

- Neem (planc) and its parts are being used to manufacture urea coating agent to improve and maintain the soil fertility. The fertility of the soil can be measured by the amount of Nitrogen, Potassium and Phosphorous it has.
- PLANC if mixed with Nitrogen fertiliser such as Urea and Ammonium nitrate will help in reducing nitrogen losses and also to increase its efficiency.
